

Hi! My name is

# Dan Grinberg.

I'm a frontend developer with 4+ years of experience from Yerevan. Looking for a remote job

## Technologies I use most often:

- React
- Sass/SCSS (BEM, PostCSS, CSS Modules)
- JavaScript (ES6+, TypeScript)
- Webpack, Gulp
- Unit testing (Jest, Testing Library)
- git, GitHub

## Experience

**Freelance** // November 2017 – February 2020

I've been working with:

HTML, Sass, JavaScript, Gulp, jQuery, Flexbox, media-queries, PHP

I've been developing responsive landing pages and multipage websites on Upwork-like marketplaces. Adding Google & Yandex metrics. Using PHP as a backend language.

During this time I've worked with LEVI's, Xiaomi, Divico, and Стоното.

**William Reilly School, English teacher** // August 2019 – November 2019

I've been teaching teenagers and grown-ups.

**Lead Frontend Developer** // March 2020 – February 2022

Due to the contract terms, I cannot state the company's name or share any screenshots of my work but I can tell you *what* I've been doing there.

Technologies I've worked with:

React (v16.8+), Antd, React Context API, TypeScript, Sass/SCSS, Jest, Testing Library

My job was to develop the client side with React. I've been creating both isolated & reusable components and entire Single-Page Applications. Writing unit tests was also a part of my job.

I've been using dynamic charts from antv и anychart to visualize stats on the page.

We used Trello as a progress tracker.

All completed tasks had to be committed and pushed to git.

We also had a backend team on the project. They provided methods for authentication and saving users' data on the page.

I've been working with their REST API.

Sending and chaining multiple asynchronous requests was necessary to fetch the data needed in the page's logic.

Later on, I started managing a small frontend team.

I've been giving & checking tasks, mentoring, and code-reviewing.

## About me

I work in VSCode.

To analyze mockups I use Avocode and Figma.

Familiar with Markdown and Pug. A little less with PHP.

Experienced in building responsive and cross browser websites.

Love semantics, have a good understanding of what aria-\* attributes are and what they're for.

Very good at vanilla JavaScript.

I document my code with JSDoc and debug it in Chrome Devtools.

I can edit configs and write them from scratch.

Webpack, Gulp, Babel, eslint are just a few.

Regularly use Trello and git for my pet projects.

In my free time, I like to make games.

Now, for example, I'm learning the Godot engine.

## Languages

- Russian – Native
- English – C1, I have no problem reading documentation or communicating with native speakers

## Contact me

You can text me on Telegram
