

Hi! My name is

Dan Grinberg.

I'm a frontend developer with 4+ years of experience from Yerevan. Looking for a remote job

Technologies I use most often:

- React
- Sass/SCSS (BEM, PostCSS, CSS Modules)
- JavaScript (ES6+, TypeScript)
- Webpack, Gulp
- Unit testing (Jest, Testing Library)
- git, GitHub

Experience

Lead Frontend Developer // March 2020 – February 2022

Due to the contract terms, I cannot state the company's name or share any screenshots of my work but I can tell you *what* I've been doing there.

Technologies I've worked with:

React (v16.8+), Redux, AntD, TypeScript, Sass/SCSS, Jest, Testing Library, Webpack

I've been developing the client side with React: both isolated & reusable components and entire Single-Page Applications. Writing unit tests was also a part of my job.

We used Redux as a state manager with React Context API.

I've been working with REST API. Used axios to send & fetch data from the server.

We used Trello as a progress tracker.

All completed tasks had to be committed and pushed to git.

Later on, I started managing a small frontend team.

I've been giving & checking tasks, mentoring, and code-reviewing.

Freelance // November 2017 – February 2020

I've been working with:

HTML, Sass, PostCSS, JavaScript, jQuery, Flexbox, Figma, Gulp, PHP

I've been working on developing responsive landing pages and multipage websites.

Configuring Google & Yandex metrics. Using PHP to work with Google Sheets API.

During this time I've worked with LEVI's, Xiaomi, Divico, and Столото.

About me

Excellent knowledge of JavaScript (ES6+).

TypeScript is my choice wherever it's possible.

I document my code with JSDoc and debug it in Chrome Devtools.

Experienced in converting Figma and PSD to HTML and building responsive websites.

Love semantics, and have a good understanding of what aria-* attributes are and what they're for.

In my projects I use CSS Modules.

Familiar with Styled Components.

I can edit configs and write them from scratch.

Webpack, Gulp, Babel, eslint are just a few.

Regularly use Trello and git for my pet projects.

In my free time, I like to make games.

Now, for example, I'm learning the Godot engine.

Languages

- Russian – Native
- English – C1, I have no problem reading documentation or communicating with native speakers
